

## CLAIMS

1. A dual mode RFID reader, comprising:

(an antenna for receiving and transmitting RF signals,  
a RF source and Preamplifier module,  
a power supply,  
an input/output connection, and  
a digital signal processor module;

/ said antenna connected to said RF source and preamplifier module for receiving and transmitting RF signals;

said digital signal processor module controlling said RF source and preamplifier module, and decoding said RF signals received antenna.

said digital signal processor operable with more than one of a RFID protocol by changing an operational characteristic of said RF source and preamplifier module.

2. The device of Claim 1, wherein:

said Digital signal processor includes a flash memory,

said flash memory loadable with operational data, allowing the device to be reconfigured by a host computer.

3. The device of Claim 1, wherein:

said more than one RFID protocols include Intellitag 500 and ISO/AAR protocol.

4. The device of Claim 1 wherein:

An operating range of the device is adjustable by varying a RF signal power output level.

5. The device of Claim 1 wherein:

An operating range of the device is adjustable by varying a data threshold level.

a1

09836672-041601

6. The device of Claim 1 wherein:

the device is enclosed in a housing formed from two identical, matching halves.

7. The device of Claim 1 wherein:

the RF source and preamplifier module filter and amplify received RF signals at a filtering and amplification level controlled by the digital signal processor.
